

“GROMANS” — VANS FOR THE DETECTION AND IDENTIFICATION OF EXPLOSIVES

Recently, the Israel Police has been equipped with ten vans, outfitted with leading-edge technology, for the detection and identification of explosives and incendiary devices.

The vans have x-ray devices, similar to the ones placed at airports. These vans will provide the police with solutions for a wide range of situations, in which there is a need for such portable devices, for example, at road-blocks, large public events, etc.

This equipment was purchased as part of the technical assistance Israel has received from the USA, in its effort to assist in the fight against terrorism in the area.
